Reference:	UPDATE AFC-3.0 DI compatibility issue with specific engine types.
Article number:	-
System:	All

Dear customer,

To follow-up info bulletin 321, we would like to inform you that there is an extension to the production range of affected AFC-3.0 DI's. Some AFC-3.0 DI's are not compatible with specific applications.

What changed?

It concerns all AFC-3.0 DI's produced between week 44, year 2022 and **week 26**, year 2023.
Serial Number Range → C/**44/22**/0000 till C/**26/23**/9999

Content of INFO 231 (unchanged):

According to field information and further internal investigation, Prins found that a specific batch of the AFC-3.0 DI is **NOT** compatible with the following application/engine types:

- ➔ PSA/Stellantis 1.2 Puretech with the **VD56.1 Petrol ECU**

Important note: The AFC-3.0 DI is not broken, but only not compatible with the mentioned engines. The AFC-3.0 DI can be used in other applications.

Possible issues:

- ➔ Multiple petrol injector related error codes.
- ➔ Proper functioning in cold conditions but improper functioning during warm condition.
- ➔ Not possible to start or cutting out of the engine due to error codes.

Solution:

Replace that specific AFC by an AFC from another production batch.

How to handle:

- ➔ Replace the AFC-3.0 DI according to the above-mentioned solution.
- ➔ Re-use the AFC-3.0 DI in another application/conversion.
- ➔ Do not send back the AFC-3.0 DI for warranty.

Kind regards,
Prins After Sales Department
